

FREMONT-WINEMA NATIONAL FOREST
Chiloquin Ranger District
2014 End-of-Season Monitoring Report

2014 End-of-Season monitoring results on the Applegate allotment.

Pasture-Key Area	Utilization			
	Allowable Use		Actual Use	
	Dry-Moist Meadows	Shrubs	Meadows	Shrubs
Applegate North	40-45%	45%	NU	NU
Applegate South	45%	45%	30-40%VE	40%VE

NU=Non-Use, VE=Visual Estimate

Summary:

Livestock started at Calimus Corrals and moved west and north throughout the summer. They were taken out on the 43 road in September. There were a few problems with small groups of sheep wandering out of the allotment that were resolved quickly. Management activities across the allotment are good and under the continued management practices Forest Plan standards will be met into the future.

Recommendations:

At this time there are no changes needed to this allotment. Incidents of wandering stock should get better when the manager and herder become more familiar with the allotment boundaries. Allotment boundaries will be reviewed with the permittee prior to the 2015 season.
